

## CATALOGING AND PROCESSING SERVICES

We offer cataloging services for imprints & e-books, supplying MARC records

### What can we say about the quality of our services?

Our catalogers have been trained by The Library of Congress (in the past with AACR2 & LCRI; at present using RDA & LC-PCC PSs). The work of our staff is permanently reviewed by them. We are offering three distinct options, which vary according the level of cataloging and the amount of additional processing provided:

#### Option 1:

##### MARC Minimal Level Cataloging with No Additional Processing:

Minimal level Cataloging (Encoding Level 7) verified and edited by our catalogers.

- LC Authority Control.
- Price: The cost is due to the editing, quality control, and authority control performed by our catalogers.

#### Option 2:

##### MARC Core Level Cataloging with No Additional

Processing: Core level Cataloging (full cataloging).

- LC Authority Control.
- Subject cataloging with LCSH.
- LC classification.
- For each book it consider necessary we send on approval plan, an 856 field with a URL linked to scanned copies of the table of contents. This might help researchers quickly determine the book's contents. The scanned images are stored in our own on-site server.

## Option 3:

### MARC Core Level Cataloging Plus Shelf-Ready Processing:

- MARC core level cataloging, idem Option 2.
- Shelf-Ready technical processing according to your library's needs, including: Shelf labels, Magnetic security strips, Barcodes and o Inventory numbers. All of that shall be provided by your Library.

Note: There are extra charges for binding, bookplates, and any other additional features.

It is important to remark that if you choose this service your library will have additional metadata for approximately 80% of the books we sent. For each of those books, an 856 field with a URL linked to scanned copies of the table of contents. This might help researchers quickly determine the book's contents. The scanned images are stored in our own on-site server that will be IP controlled in the near future.

*Currently many libraries have in their catalog our records with the 856 field with the pdfs hosted in our server because they download the record from OCLC and we do not received nothing in exchange.*

## How do you prefer to receive your MARC records and invoices?

There are three different options; we just need to know which one is the most convenient for your Library:

- SFTP o FTPS. File in our server.
- SFTP o FTPS. File in your server (in this case we would need the following information: Server, Username, Password, Port).
- Via e-mail

## Sample of one of our Core Level MARC records, according to RDA & LC-PCC PSs
